Verdict	**TIES**
Report contract	RELEASE ALLOWED — 17/17 contract figures from the finished overview.xlsx tie to 2 anchors outside the engine (±€1; percentages = correctly rounded anchor) · contract signed by controller (demo) 2026-09-27
EBITDA year to date (€)	160,044.52
Revenue year to date (€)	1,496,289.32

Findings for the board

- Toys: year-on-year decline 3 quarters in a row (Q1 −6.8%, Q2 −13.5%, Q3 −18.5%)

Full-year EBITDA forecast (€)	241,295.81
Full-year EBITDA plan (€)	264,955.42
Forecast method	Rest-of-year forecast: month = month's plan × (actual ÷ plan for the last 3 months) by cost centre and line; a line without a plan = average of the last 3 months; tax = 21% × forecast profit before tax. The plan does not include income tax — plan tax = 21% × the month's planned profit before tax.

Full-year forecast

- Revenue 2026 — forecast €2,122,954: vs plan −€8,532 (−0.4%), vs last year +€149,356; of which actual €1,496,289 and rest-of-year forecast €626,665.
- EBITDA 2026 — forecast €241,296: vs plan −€23,660 (−8.9%), vs last year +€19,825; of which actual €160,045 and rest-of-year forecast €81,251.
- Net profit 2026 — forecast €149,246: vs plan −€17,233 (−10.4%), vs last year +€17,120; of which actual €95,279 and rest-of-year forecast €53,967.

Largest variances vs plan

- Store OC · Rent: EBITDA impact −€15,600 vs plan (−31.0%) — since 2026-04, every month −€2,600; vs last year −€15,600.
- Store Mesto · Gross margin: EBITDA impact −€3,904 vs plan (−4.4%) — mainly in Q2 (−€2,692); vs last year +€2,735.
- Store OC · Gross margin: EBITDA impact +€3,626 vs plan (+1.6%) — mainly in Q3 (+€5,421); vs last year +€20,919.
- Store Sídlisko · Gross margin: EBITDA impact −€3,286 vs plan (−2.7%) — spread across the year (average −€365 per month); vs last year +€5,738.

Risks and opportunities

- Energy: in Q1 2026 +35.0% year on year, last 3 months +0.0%; if the spike repeats in the rest of the year (last year −€5,083 × 1.35), EBITDA −€1,779 vs forecast.

Forecast sensitivity to the method (items overlap — do not add them up)

- Stationery (growth +21.9% year on year in Q3, 3 quarters in a row): if the year-on-year trend continues, the pace of the last 3 months overstates the forecast — in the same months of last year the category had a 52.9% share of revenue, in the rest of the year 33.8%; correction to the rest-of-year share: EBITDA −€9,783 (× gross margin).
- Toys (decline −18.5% year on year in Q3, 3 quarters in a row): if the year-on-year trend continues, the pace of the last 3 months overstates the forecast — in the same months of last year the category had a 15.0% share of revenue, in the rest of the year 25.1%; correction to the rest-of-year share: EBITDA −€4,356 (× gross margin).

What was not checked

- whether a posting is on the right account in substance — the checks verify the reconciliation of sources and totals; the cost centre and month of invoices are matched to the invoice register
- VAT — the rates on receipts are not checked against the category; what is checked is revenue excl. VAT (604) and the total incl. VAT by day and payment method
- depreciation (551) — not checked without a fixed asset register; income tax (591) is an interim estimate of 21% of profit, not checked against the tax return (only the payment of the advance 341 from the bank is checked — except for the last month of the period, whose payment arrives after the period)
- authenticity of source documents — a fake receipt entered in the POS and in TOTAL, or a fictitious invoice from a supplier in the master data that is posted and paid, will pass: source ↔ source reconciliation by design cannot see a source falsified at the start
- goods category on the receipt — the POS is the only source; a shift of revenue between categories with the same VAT rate is not detected
- shortage and stock write-off — a stock issue without a sale recorded consistently in stock, journal and trial balance will pass
- tolerance of €0.05 a day in the reconciliation of revenue excl. VAT (VAT rounding on receipts) — at most ~€100 for the whole period
- bank account balance against the real bank — the statement is checked against itself and against the books
- payments of opening liabilities as at 2024-12-31 are matched only to balance sheet account 321 (the invoice register starts in 2025)
- plan values — shape only (a plan is an intention, not a fact)
- exceptions are switched off until management decides — every finding means DOES NOT TIE
- 1042 trial balance rows outside the P&L (classes other than 5/6, turnover €30,635,737.97) — they do not enter the P&L and were not checked
